DETAILED ACTION

EXAMINER'S AMENDMENT

An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it **MUST** be submitted no later than the payment of the issue fee.

The application has been amended as follows:

Claim 10, line 2, "imging" has been changed to read ---imaging---.

Claim 11, line 2, "imging" has been changed to read ---imaging---.

Allowable Subject Matter

Claims 1-11 are allowed.

The following is an examiner's statement of reasons for allowance:

The prior art taken either singularly or in combination fails to anticipate or fairly suggest the limitations of the independent claims, in such a manner that a rejection under 35 U.S.C. 102 or 103 would be proper. The prior art fails to teach a combination of all the claimed features as presented, for example, in independent claim 1, which include a zoom lens system a first unit having a negative power, a second unit having a positive power, the second unit having a cemented lens element joining three lens

elements, and a lens element having a positive power, a third unit having a positive power, and an aperture stop disposed between the first unit and the second unit, where among the three lens elements which form the cemented lens element, a lens element disposed on the object side directs a convex surface toward the object side while a lens elements disposed on the image side directs a concave surface toward the image side as well as satisfying the recited numerical condition.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Ohashi et al, Hirakawa and Goosey, Jr. are all cited to show a zoom lens system having a -, +, + configuration, but do not meet all of the required limitations in the claims.
